Mun Twitter Wiki

Created	March 14, 2026
Last Updated	August 2026
Creator	cab
Precursor	Mun Twitter Wiki (Fandom)
Software	Dokuwiki
Plugins	16
Registration	Free, valid email not required ¹⁾ This is because the email service does not work currently.
Funded By	cab
Demonym	Munters, Mitters
Hosted By	cunny.taxi
Successor	muntwitter.wiki

Mun Twitter Wiki (MTW) is a free wiki that chronicles information from [Cumball](#), [cunny.zone](#), [cunny.taxi](#) and [more](#) created, moderated, and funded by [cab](#). Any content in namespaces is other content not related to Cumball, cunny.zone or cunny.taxi, and to write new unrelated content a new namespace must be created.

MTW is planned to be supported indefinitely and, if not, it will be archived and closed after a wide announcement. Plans are underway to move MTW eventually to its own standalone website [muntwitter.wiki](#). If this plan goes through, all current wiki links will redirect to their corresponding links on [muntwitter.wiki](#)

Rules

See: [Rules](#)

MTW has minimal rules, mostly because it's moderated by [cunny.taxi](#) and MTW's creator [cab](#). Due to its nature as a personal passion project, it's in cab's best interest to reduce legal issues that may arise with copyright or illegal content, as such, there are rules against both.

Origin

MTW is the direct successor to [Mun Twitter Wiki \(Fandom\)](#) and serves as the definitive version of it as well as an official upgrade, featuring more than just information from Cumball. The new MTW was created on March 14, 2026 on cab's personal website and host of other services [cunny.taxi](#) after discussions between cab and his associates.

Use of Dokuwiki

Mun Twitter Wiki uses Dokuwiki because of its minimal complexity to set up and host, and [cab](#)'s familiarity with it, as he has used it for over a year on his own local server to serve his own personal wiki. Dokuwiki is uniquely tailored to beginners because of its lack of a database for file management and its pages being simple .txt files in an easily-accessed folder.

Despite being easier than other wiki software like MediaWiki to set up, [cab](#) initially had many issues with the wiki when it was running for the first week, as symbols didn't load properly, media was being uploaded to an auto-generated 0: namespace, and the email service of the wiki used for account recovery and password changes did not work at all. Despite many months passing since most issues were fixed, the latter-most issue still persists as of writing, prompting cab to put a message on the registration/login page.

Use

Mun Twitter Wiki graduated from being a wiki being used for Cumball, cunny.zone and cunny.taxi exclusively to a wild west-like wiki that allows all forms of information, including fictional IP that do not exist. Users who wish to make their own IP within MTW must contact [cab](#) so that he can make a new namespace specifically for them. This new namespace must be unique and namespaces are served on a first-come-first-serve basis. Although the wiki has been this way for weeks, no users have taken advantage of this change, and MTW remains as a chronicle for Cumball, CZ, and cunny.taxi.

Plugins

MTW has a total of 16 non-bundled plugins alongside the plugins bundled with a standard Dokuwiki installation.
